

INTERBILLA LLC

Engineering Trusted AI Operational Capabilities

🕒 Company Overview

Interbilla LLC develops AI-native operational engineering software that enables government agencies, critical infrastructure operators, and enterprise organizations to engineer, govern, deploy, and continuously improve trusted AI operational capabilities.

Most organizations today deploy AI one application at a time. Interbilla enables organizations to build a reusable engineering foundation that continuously transforms expertise into governed operational capabilities—allowing agencies to preserve institutional knowledge, accelerate mission delivery, improve operational trust, and safely scale AI across the enterprise.

At the core of the platform is the BILLA OS™, an AI-native runtime environment designed to help organizations operationalize artificial intelligence safely, transparently, and at enterprise scale. Similar to how Kubernetes standardized cloud application deployment, BILLA OS standardizes governed AI operations across enterprises.

◆ Core Competencies & Differentiators

Core Competencies

- Multi-Agent orchestration
- AI risk management & Operational governance
- Geospatial intelligence & Spatial reasoning
- Digital twins & Remote sensing integration
- Enterprise systems OT/IT integration
- Provenance and auditability

Differentiators

- Enable trusted AI operational capabilities
- Explainable AI decision support
- Policy-based AI workflow automation
- Federated intelligence across enterprises
- Cross-domain mission coordination
- GIS and DGGS-enabled analytics

📦 Representative Solution Areas

- AI-enabled government modernization
- Enterprise AI governance
- Critical infrastructure resilience
- Geospatial intelligence
- Utility modernization
- Wildfire preparedness and response
- Emergency response
- Digital Twin Operations
- Scientific and operational workflow automation
- Human-centered AI deployment

◆ Registration & Primary NAICS Codes

- SAM.gov Registration Status: Active (Small Business)
- UEI: XTLUSNXJW3Q5
- CAGE: 11VD0
- 541511 — Custom Computer Programming Services
- 541512 — Computer Systems Design Services
- 541519 — Other Computer Related Services
- 541690 — Other Scientific and Technical Consulting Services
- 541715 — Research and Development in the Physical, Engineering, and Life Sciences
